OBJECTIVE

Aspiring Software Engineer with a B.Tech in Artificial Intelligence and Machine Learning and hands-on experience in Java, Spring Boot, Angular, REST APIs, Generative AI, RAG, and cloud technologies. Experienced in developing full-stack applications, AI-powered knowledge assistants, data engineering pipelines, and interactive analytics solutions. Strong foundation in Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks, and REST API design. Seeking an opportunity to contribute to software development, application design, testing, implementation, maintenance, and production support while continuously strengthening technical and problem-solving skills.

TECHNICAL SKILLS

Programming Languages: Java, Python

Frontend: Angular, TypeScript, Bootstrap

Backend: Spring Boot, Spring Security, JWT Authentication, Node.js, Express.js, REST APIs

Databases: PostgreSQL, MySQL, Neo4j, Database Design, Normalization

Generative AI & Machine Learning: LLMs, RAG, Prompt Engineering, Embeddings, Chunking, Knowledge Graphs, Agentic AI, LangChain, LangGraph, CrewAI, Vector Databases, Semantic Search, Hybrid Search, Re-ranking, Ollama, AI Guardrails, RAGAS, DeepEval, Transformer Architecture, Attention Mechanisms, Tokenization, Context Windows

Cloud & DevOps: AWS (EC2, S3, Lambda, API Gateway, IAM, RDS), Microsoft Azure, Git, GitHub

Data Engineering & Analytics: Azure Data Factory, Azure Databricks, Azure Data Lake, ETL Pipelines, Power BI

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, REST API Design

PROJECTS

AI Memory Mirror(In Progress)

- Building an AI-powered personal knowledge assistant using Retrieval-Augmented Generation (RAG) and semantic search.
- Developing Spring Boot microservices for authentication, document processing, chat history, and learning analytics.
- Implementing PDF parsing, document chunking, embeddings, and vector-based retrieval for contextual question answering.
- Integrating Neo4j Knowledge Graphs to improve relationship-based information retrieval.
- Developing an interview-readiness analytics dashboard to identify learning gaps and track progress.
- Building an Angular frontend with real-time chat, learning timelines, weakness tracking, and data visualization.

AI Government Scheme Advisor (RAG Chatbot)

- Developed an AI-powered chatbot using LLMs and RAG to answer user queries related to government schemes.
- Implemented a retrieval pipeline to identify relevant documents and provide context-aware responses.
- Designed backend logic for efficient query processing and context management.
- Built an interactive Streamlit interface for real-time user interaction.
- Improved response relevance using structured prompting and contextual response generation.

Olympic Analytics (Azure Data Engineering)

- Developed a cloud-based data pipeline for large-scale Olympic data analytics.
- Designed and implemented ETL pipelines using Azure Data Factory.
- Processed and transformed datasets using Azure Databricks.
- Stored and managed data using Azure Data Lake for scalable data processing and querying.
- Optimized data workflows for performance, reliability, and efficient processing.

INTERNSHIP EXPERIENCE

Full Stack Intern (Virtual) – Matrimony.com | Dec 2024 – Apr 2025

- Developed a full-stack food delivery application using Angular, Node.js, and MySQL.
- Built secure REST APIs for menu, cart, and order management.
- Implemented authentication mechanisms to ensure secure user access.
- Designed a modular backend architecture focused on scalability and maintainability.
- Integrated frontend and backend components to support real-time order tracking and updates.

Green AI Intern (Virtual) – Edunet Foundation | Apr 2025

- Developed an AI-based wildfire image detection model using deep learning techniques.
- Built a CNN image classification model using TensorFlow/Keras.
- Applied image preprocessing and data augmentation techniques to improve model performance.
- Achieved over 90% training accuracy through model optimization.
- Evaluated model performance using loss and accuracy visualizations.

Data Visualization Intern (Virtual) – Infosys Springboard | Oct – Dec 2024

- Analyzed and processed air quality datasets using Python and Pandas.
- Developed interactive Power BI dashboards for pollution analysis across cities.
- Built a fuzzy-matching chatbot integrated with a Streamlit application.
- Implemented automated PDF report generation for summarized analytical insights.
- Improved data accessibility through interactive and user-friendly visualizations.

EDUCATION

B.Tech – Artificial Intelligence & Machine Learning (2022–2026) – Completed

K. Ramakrishnan College of Engineering, Trichy

CERTIFICATIONS

AWS Certified Cloud Practitioner – Amazon Web Services

Microsoft Azure Fundamentals (AZ-900)

Python Programming – GUVI

Java Programming – Infosys Springboard

Database Management Systems (SQL) – Infosys Springboard
